Commento alla Mostra*

...4° edizione del Genovamineralshow!

La 4° edizione del Genovamineralshow che quest'anno e' stata organizzata a metà Maggio nella ormai consueta sede dei Magazzini del Cotone con un notevole sforzo organizzativo che è stato premiato dal successo di pubblico sia collezionisti che visitatori che hanno contribuito al successo della manifestazione

panoramiche del Porto Antico

In questa edizione l'organizzazione ha cercato di porre particolare attenzione alla qualità degli espositori e conseguentemente del materiale proposto, cercando di miscelare in maniera omogenea e non eccedere per tipologie di materiale esposto.

Un ringraziamento particolare agli amici del Gruppo Mineralogico Coop A.Negro che si sono prodigati nell'aiutarci a pubblicizzare l'evento e inoltre hanno presentato nuovi ritrovamenti liguri per la prima volta quali la Poppite e la scheuchzerite .

Anche la presenza dell' Istituto Gemmologico Ligure ha contribuito a completare l'offerta esposta con dimostrazioni e illustrazione del calendario corsi.

Infine anche il Museo Paleontologico Maini di OVADA ha allestito una stand didattico prodigandosi in varie spiegazioni ai numerosi visitatori.

Segnalazioni

This fourth edit has seen the participation of a good selection of Italian and international exhibitors', who have presented also some news in Italian Mineralogico field.

Beginning from the Liguria we signal a good finding of quartz and Epidoto of the Sestri Levante area. Characterized by very bright little green crystals which are in contrast with the transparent and quartzes. Between the new findings to signal the Poppite first and only worldwide finding made in the Gambatesa mine. Other new findings made recently are the Scheuchzerite and the Ansermeite .

esposizioni e visitatori..

Remaining in the Italian world to signal a few alpine sample quartz, pink Fluorites, pink Apatiti of the Val Aurina, Hessonitie Natrolite and other classic such as the Brusson gold. A few researchers have quartzes from Carrara marble and other older samples from the Tuscan mines

From Sardinia the principal news was characterized by Ferrieriti in red orange balls -in association with Mordennite and Heulandite in samples of remarkable beauty. Some others classical from the island were Barite Fluorite and Ametistini quartzs of Osilo.

To finish we signal a few old samples what a remarkable crystal of Scheelite of Traversella and a Hessonite coming from the famous place of the Testa Ciarva .

...esposizioni

A livello internazionale era presente un buon assortimento di minerali rari quali ad es. tsumebite, iranite, congolite. Dai paesi più classici quali Pakistan ed Afghanistan un'ottima selezione di minerali gemmosi classici accompagnata da una selezione di minerali di fessura alpina quali brookiti e soprattutto anatasi in un'ampia scelta. Molto interessanti alcuni cristalli violacei gemmosi di scapolite. Come ad ogni mostra non potevano mancare un assortimento di minerali cinesi di varia dimensione e prezzo in particolare fluoriti verdi, quarzi e bariti, sfaleriti ed inesiti. At international level a good assortment of rare samples was present such as. tsumebite, Iranite, Congolite From more classical countries like Pakistan and Afghanistan a excellent selection of classical gem minerals and nice from a selection of alpine fissures like Brookiti and above all Anatasi in a wide choice. Interesting a few purple Scapolite crystals. As in every show could not miss an assortment of Chinese samples of several dimension and I value in particular green Fluoriti, quartzes and Bariti, Sfaleriti and Inesiti. From Russia and neighbouring countries some beautiful crystal of rare Alessandrite, Diopasi with Calcite, Stellerite and Fluoriti of Dal' Nergosk in green and transparent crystals.

In general the level of the mineral complaints was altogether very good with a wide possibility of choice for the visitors and collectors as it was spacing from the systematic samples to aesthetic ones

A mention also to the French fossils , others from Madagascar and Russians above all of the remarkable Trilobiti.

Also the Gems level was represented well with many varieties for collection and jeweller's shop. Obviously many others were the samples and the stands to be highlighted.

In this edit we have dedicated part of the pavilion 8 to the usual exposure. For the first time the most representative pieces of the ex Pusceddu collection have been exposed to the audience, between the others the exceptional samples of Fluorite blue, coming from a unique vug of the mine of S. Lucia, in samples to the intense blue colour.

Other samples were bariti in honey crystals, mimetiti, linariti and many others.

The Museum Of Natural Sciences of Turin has cured a selection of minerals from the plumb-Zincifere mines of Monteponi, spectacular Anglesiti and Fosgeniti from this place which has provided the best samples at worldwide level of this mineralogical species.

The exhibition which had as principal theme the minerals of Sardinia and has been put beside by an exposure concerning the latest Ligurian Mineralogical news from the friends of the Mineralogico A.Negro group.
